

1. Loo repositoorium, kus on ainult ühe rakenduse kood, kasutades süntaksit `<ainekood>-<aasta><s|f>-hw[0..9]`. Näiteks `iti0213-2021s-hw1`

2. Navigeeeri seadetesse, ning luba sealt shared runner.

Settings → CI/CD → Runners (expand) → ENABLE SHARED RUNNERS

### 3. Lisa kasutaja “@kejans” Developer õigustega repositooriumisse.

Search

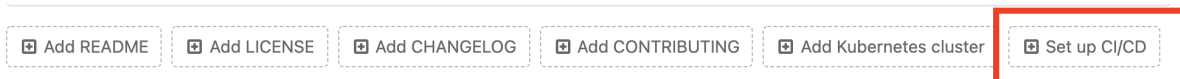

Sort by Name, ascending

### 4. Comiti sinna oma rakenduse lähtekood. NB: Üks rakendus ühe repositooriumi kohta! Struktuur peaks välja nägema selline, nagu alloleval pildil.

Add README Add LICENSE Add CHANGELOG Add CONTRIBUTING Add Kubernetes cluster Set up CI/CD

Name	Last commit	Last update
app	test	2 weeks ago
gradle/wrapper	test	2 weeks ago
build.gradle	Update build.gradle	4 days ago
gradle.properties	test	2 weeks ago
gradlew	test	2 weeks ago
gradlew.bat	test	2 weeks ago
settings.gradle	test	2 weeks ago

## 5. Peale seda tekib nupp Set up CI/CD (punane kast). Vajuta selle peale.

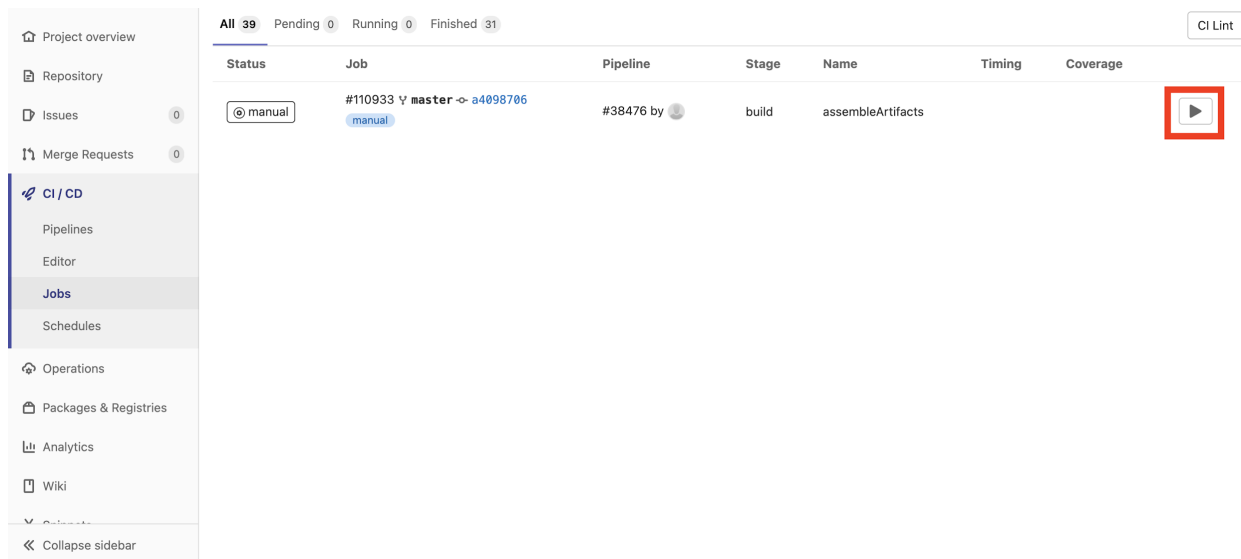

Buttons: Add README, Add LICENSE, Add CHANGELOG, Add CONTRIBUTING, Add Kubernetes cluster, **Set up CI/CD**

Name	Last commit	Last update
app	test	2 weeks ago
gradle/wrapper	test	2 weeks ago
build.gradle	Update build.gradle	4 days ago
gradle.properties	test	2 weeks ago
gradlew	test	2 weeks ago
gradlew.bat	test	2 weeks ago
settings.gradle	test	2 weeks ago

## 6. Kopeeri järgnev fail, kleebi see Gitlabis olevasse valgesse kasti, ning salvesta see. (commit change)

### FAILI LEIAB: [SIIT](#)

7. Peale seda navigeeri vasakult menüüst CI/CD → Jobs alla. Ning vajuta alumisel pildil punasega tähistatud "run" nuppu. Peale seda pannakse *pipeline* tööle ja läheb kuskil 5 - 10 minutit, et testi tulemused emaili peale jõuavad. Peale igat koodi *pushi*, saad testida samamoodi vajutades kõige üleval olevat "run" nupu.
