Introduction

The goal of this project is to develop a comprehensive web platform to serve as a centralized hub for apartment associations and terraced housing associations and communities, enabling them to efficiently manage various tasks related to property maintenance, internal operations and vendor management.

The development of a comprehensive web platform to serve as a centralized hub for apartment associations and terraced housing communities has the potential to significantly improve the lives of residents and enhance the efficiency of property management operations. By providing a centralized platform for managing tasks related to property maintenance, internal operations, and vendor management, this web application offers several key benefits:

Key features include:

Task management system for tracking and scheduling routine maintenance tasks like snow removal, landscaping and other property-related services. Database manages task details, schedules and completion statuses.

Vendor directory for holding data for vendors who have done past jobs, their performance evaluations and service offerings.

Work order requests from residents for maintenance issues or repairs. Database tracks work order histories, resolutions and associated costs.

Internal workforce management allows associations to manage their internal maintenance teams, assign tasks and monitor work progress. Database manages employee profiles, work schedules and performance records.

Document repository maintains a secure repository for important documents, such as association bylaws, contracts and maintenance manuals. Database organizes document categories, versions and access permissions.

Financial management includes financial tools for tracking expenses related to maintenance, vendor payments and budgeting for future projects. Database stores financial records, budget details and transaction histories.

Communication hub that provides a communication platform for residents, association members and vendors to stay informed about upcoming maintenance activities, community news and service updates.

Resident feedback system for residents to provide input on maintenance services and vendor performance. Database stores resident feedback, vendor ratings and improvement suggestions.

Calendar for events and maintenance and important deadlines. Database manages event details, schedules and attendee lists.

Emergency response plan (premium) enables associations to create and manage emergency response plans, including contact lists, evacuation routes and crisis communication. Database stores emergency plans, contact details and incident reports.

Task assignment and notifications to specific vendors or internam teams with automatic notifications for upcoming tasks and deadlines. Database manages tasks assignments, notifications and status updates.

By providing tools for effective task management, vendor management, communication, and community engagement, the platform has the potential to make a positive impact on the lives of residents, improve the quality of property management operations, and create more vibrant and connected communities.

Users who have admin role can see User Manager where they can create and delete users and roles and add or remove roles from users. In ASP.NET application administrators also have full CRUD for every object and separate view for language strings.

Application has support for different languages (currently English and Estonian).

Diagrams

Diagram 1: Entity Relationship Diagram

Apartment Association/Community Management Hub ERD

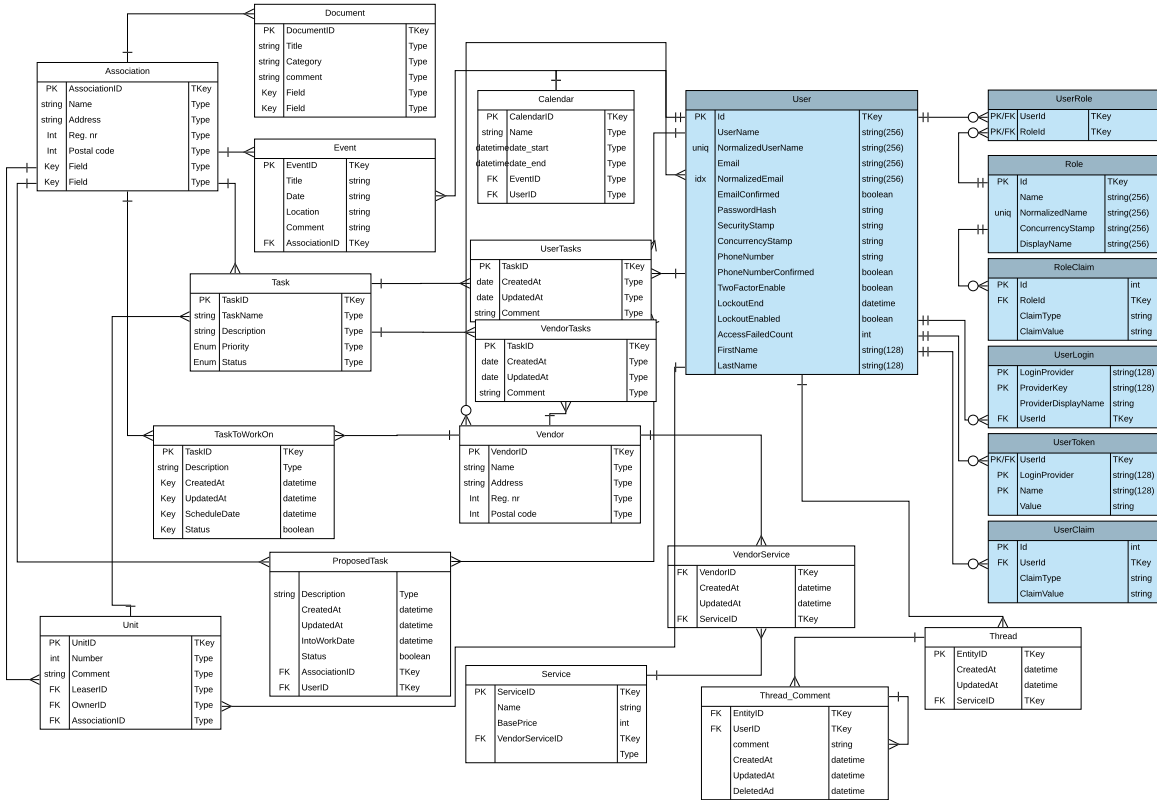

Diagram 2: Main client positive flow and view

The diagram illustrates the main client interface for a landlord. It features a vertical sidebar on the left with navigation links: Dashboard, Associations, Leases, Maintenance, Tasks (highlighted), Communication, Files, and Calendar. Below these are links for Help & Support, Settings, and Account. The main content area is titled 'Landlord' and includes a '+ Create new task' button. It is divided into two primary sections: 'Tasks' and 'Overdue tasks'. The 'Tasks' section contains sub-tabs for 'Incoming tasks' and 'Tasks in progress', each with three placeholder rows. The 'Overdue tasks' section contains sub-tabs for 'My overdue tasks' and 'All overdue tasks', each with three placeholder rows.

The 'New manager sign up' form is displayed on a dark background. It includes the following fields and elements:

- First Name**: Text input field.
- Last Name**: Text input field.
- Company code***: Text input field.
- E-mail***: Text input field.
- Phone nr***: Text input field.
- Password**: Text input field.
- Confirm Password**: Text input field.
- End user terms of agreement***: A checkbox.
- Verification Files:***: A large text area for file uploads.
- Next**: A button located at the bottom right of the form.
