# 1. Application overview

## 1.1 Introduction

This application was created with the aim of making it easier for people to find new place (house/apartment) where they can live and change their old one. Application enables users to list their homes or apartments and browse through listings from other users.

The application allows users to filter their search based on various criteria such as location, size, and condition. Once a user has found a suitable listing, they can contact the owner to arrange the swap. The basic principle of operation for this application is to facilitate the exchange of homes or apartments between two parties.

Users can create a listing for their home or apartment, indicating their desired swap location, dates, and any additional details about the property. Other users can then browse these listings and contact the owner directly to propose a swap. The final details of the swap, such as any rules or expectations, are agreed upon between the two parties.
